4 OCTA TABLETAIL MONKEY KIT

This chunky, hardcore tablet stand/holder is a serious bit of kit. It's essentially a heavy, bendy rod wrapped in silicon, with a suction cup at one end to grip your tablet of choice. The idea is that you attach your device, then use the rod to hold it in place for easy operation – be it wrapping around a pole or some heavy object, or simply curling it into a nifty desk stand.

The suction cup is as powerful as we hoped, able to clutch a variety of tablets securely and never letting go, even under severe prodding duress. The soft-touch silicon feels nice and we had no trouble bending it into the desired shapes, although it's obviously not quite as subtle as some stands. It's the flexible nature of the Monkey Tail that stands it apart, and we love finding new places to dangle it from.
